

Ziyavul Haq

Full-Stack Developer | React · Next.js · Node.js · MongoDB · TypeScript

ziyavulhaq94@gmail.com | +91 8891958746 | [linkedin.com/in/ziyavul-haq](https://www.linkedin.com/in/ziyavul-haq) | github.com/ziyahulhaq | ziyahulhaq.github.io

Profile

Full-stack developer with around 1 year of experience building and shipping end-to-end web applications using React, Next.js, Node.js, and MongoDB. Trained at Mentrex Academy and self-driven through 3 production-level projects. Comfortable owning features across the entire stack — from database schema to polished frontend.

Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React 19, Next.js 16, Vite, Tailwind CSS v4, Shadcn UI, Radix UI, Styled Components, React Router DOM

Backend: Node.js, Express.js 5, REST APIs, Next.js API Routes, Server Actions

Databases: MongoDB, Mongoose, PostgreSQL (Prisma ORM), Pinecone (vector DB)

AI / LLM: OpenAI API, Google Gemini API, GROQ SDK (streaming), RAG pipeline design

Auth & Security: JWT (HttpOnly Cookies), bcrypt, role-based access control

Tooling: Git, GitHub, GitHub Actions (CI/CD), Docker, Render, Vercel, AWS (EC2, S3), Cloudinary, ImageKit, PostHog

Projects

Contextify — AI Document Knowledge Base

github.com/ziyahulhaq/Contextify

Next.js 16, TypeScript, Prisma, Pinecone, OpenAI, Gemini, GROQ SDK, JWT, bcrypt, ImageKit, Tailwind CSS v4, Shadcn UI

- Architected a full RAG pipeline supporting 3 LLM providers (OpenAI, Gemini, GROQ) — parses PDFs and Word files, chunks content, generates embeddings, and upserts vectors into Pinecone with per-user namespace isolation
- Engineered a streaming chat API that queries Pinecone for top-5 semantic chunks and pipes GROQ completions to a real-time frontend UI with Markdown rendering and retry/reingest fallback
- Secured 4+ API route groups with JWT middleware and bcrypt hashing, enforcing user-scoped access to documents, chats, tags, and ImageKit file uploads
- Assembled a reusable component library of 10+ Shadcn/Radix UI components with class-variance-authority, ensuring consistent design tokens across the entire app

EMS — Employee Management System

github.com/ziyahulhaq/ems | Live

React 19, Vite, Node.js, Express.js 5, MongoDB, Mongoose, JWT, bcrypt, Multer, Tailwind CSS, Docker, Render

- Shipped a 2-role (admin/employee) dashboard with 4 REST modules — /api/auth, /api/department, /api/employee, /api/leave — and JWT middleware enforcing permissions on every route
- Implemented atomic employee–user account linking across 3 operations (create/update/delete), reducing data inconsistency risk with 5+ Mongoose-level validations
- Delivered a 4-state leave management workflow (pending/approved/rejected/reset) with admin review notes and employee-scoped submissions
- Containerized the application with Docker, configured Cloudflare-compatible CORS, and deployed on Render with zero-downtime production setup

DevEvent — Developer Event Discovery Platform

github.com/ziyahulhaq/DevMeetT

Next.js 16, TypeScript, MongoDB, Mongoose, Tailwind CSS v4, Cloudinary, OGL (WebGL), Server Actions, PostHog

- Modelled 2 Mongoose schemas (events and bookings) with slug generation, date normalization, email validation, query indexes, and a unique booking constraint per event/email pair
- Configured cached Next.js API routes for event listing and detail pages with tag-based similar-event recommendations, cutting redundant DB queries
- Wired a booking Server Action with Cloudinary image upload (local fallback) and PostHog analytics tracking 2 key funnel events: booking success and booking failure
- Animated a WebGL light rays hero section using OGL for a visually distinctive experience with 0 impact on initial page load performance

Education

Higher Secondary Certificate (+2), Humanities

2025

Mentrex Academy — Full-Stack Web Development

2024–2025

Completed hands-on training in React, Next.js, Node.js, MongoDB, REST APIs, and full-stack practices.
